

Clinical Brief

Patient ID: P002

Alert Summary

trigger: Blood glucose reading of 210 mg/dL detected by Dexcom G6 CGM, exceeding threshold of 180 mg/dL

severity_class: MODERATE

severity_score: 4

timestamp: 2026-05-14T07:45:00Z

Patient Snapshot

patient_id: P002

demographics: Demographics not available in EHR

active_conditions

- Type 2 Diabetes since 2018
- Obesity since 2018

current_medications

- Metformin 1000mg twice daily
- Empagliflozin 10mg daily

contextual_analysis: The glucose elevation to 210 mg/dL occurred three days after the patient began a planned high-carbohydrate diet trial with a nutritionist (Anamnesis). EHR notes from 2026-02-01 confirm this dietary change was discussed and planned, and the patient remains adherent to Metformin and Empagliflozin with no missed doses reported (EHR, Anamnesis). No hyperglycemia symptoms are reported (Anamnesis).

risk_assessment: This glucose elevation may suggest a transient response to the recent high-carbohydrate diet trial rather than medication nonadherence or acute decompensation. Continued monitoring could indicate whether this is an expected effect of the dietary intervention.

recommended_actions

- - action: Consider monitoring glucose trends over the next several days to assess response to dietary trial
 - confidence: 0.95
 - source: Alert + Anamnesis
- - action: Suggest patient contacts care team if symptoms of hyperglycemia develop or if glucose remains >200 mg/dL for multiple readings
 - confidence: 0.9
 - source: Anamnesis
- - action: Review dietary plan with nutritionist and consider adjusting carbohydrate intake if persistent elevations occur
 - confidence: 0.85
 - source: EHR + Anamnesis

uncertainties_and_gaps

- Demographics (age, gender) not available in EHR
- No recent vital signs or weight data
- No explicit documentation of food intake quantities/types
- No recent labs since 2026-02-01
- No reported symptoms, but specific hyperglycemia symptoms (thirst, polyuria) not explicitly queried
- No documentation of recent weight changes
