

Clinical Brief

Patient ID: P001

status: EMERGENCY ESCALATION

message: Alert requires immediate human attention. Full AI synthesis skipped.

action: Contact clinician and patient NOW. Do not wait.

patient_id: P001

Alert

scenario_id: scenario_1

description: Missed Medication — BP spike after stopping Lisinopril

patient_id: P001

reading: blood_pressure

value: 178/108

unit: mmHg

timestamp: 2026-05-14T09:31:00Z

device: Omron BP Monitor

threshold: 140/90

alert_level: HIGH

Triage Output

Severity

score: 7

class: HIGH

reason: BP 178/108 is significantly above the threshold of 140/90. Systolic is 38 mmHg and diastolic is 18 mmHg above threshold, indicating an urgent hypertensive episode requiring prompt clinical review.

Patient Info

patient_id: P001

reading_type: blood_pressure

reading_value: 178/108 mmHg

threshold: 140/90 mmHg

deviation: systolic +38 mmHg, diastolic +18 mmHg above threshold

ehr_queries

- hypertension history and diagnosis date
- antihypertensive medication list and recent changes
- recent blood pressure trends and prior spikes
- visit notes mentioning medication adherence
- renal function and electrolyte labs

anamnesis_queries

- recent missed doses of antihypertensive medications
- symptoms of headache, chest pain, or visual changes
- recent stressors or dietary salt intake
- patient understanding of medication regimen

clinical_question: Is this acute blood pressure elevation related to missed antihypertensive medication, and does it require urgent intervention?
